

ABSTRACT OF THE DISCLOSURE

Image data read by an image information reading apparatus can be securely transferred to an image display apparatus connected thereto by a network, while a user does not feel stressed due to waiting for image confirmation. The image information reading apparatus comprises a buffer memory for storing the image data for one sheet, and the image data read by a reading unit of the reading apparatus are sequentially stored in the buffer memory while sequentially transferred to the image display apparatus via the network. The image display apparatus sequentially displays on a monitor the image data transferred thereto as a visible image.
